CROSELY TOWER DEFENSE

Abstract

Crosley Tower Defense is a tower defense game set on UC's campus. The goal is to defend the now ill-fated Crosley Tower from demolition. Players are able to strategically place students to protect the tower from waves of Tricaracopters (as found in Langsam Library) who remove the tower floor by floor. Each student is representative of one of around 7 majors offered at UC, and have abilities depending on their field of study. The goal is to create a game that is a fun and topical way to bolster school spirit among students, especially incoming 2026 freshmen.

Challenges

- Managing all game objects and states in a cohesive way (Students, Enemies, Projectiles, Tower, Currency, etc.)
- Finding servers to support game hosting and leaderboard
- Learning Unity's unique system

Technologies Used

- **Unity**
  - Game engine
- **C#**
  - The language which Unity uses for its scripts.
  - Unity has specialized libraries in C# to expedite workflow
- **Adobe Photoshop & Aseprite**
  - Used to make the sprites used in game

Impacts & Key Features

The main intention of the project is to help foster a sense of community among UC students and create a game that is **fun**, **challenging**, and **shareable**.

Students	Diverse in their skillsets and representation to showcase UC's majors
Enemies	The key conflict for the player to overcome and another way to show off UC's lore
Leaderboard	Great icebreaker or way to share

Future Improvements

Demolition of Crosley Tower is set to continue throughout 2026. As such, the game's development will continue throughout Summer 2026 in preparation for the fall semester.

Current main priorities include **playtesting**, **adding more student classes**, **improving projectiles**, and **adding a tutorial**.
